

ABSTRACT

A modular printhead mounting for a digital printer wherein the modules (2) may be mechanically aligned using specifically designed frame (3) supporting the modules

5 (2). The frame (3) has a plurality of mounting sites (19) for mounting respective printhead modules (2) to the frame (3). At least one of the mounting sites (19) includes a mechanical adjustment mechanism (15, 16, 17 and 18) for reducing input movements to effect minute adjustments of the position of the printhead module (2) with respect to the frame (3).
